## REPORT ON INSPECTION

1960

H. J. FISHER<sup>1</sup>

---

### THE FEED LAW

The statute relating to concentrated commercial feeding stuffs (Chapter 428, General Statutes, Revision of 1958) imposes upon the Station: (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Food and Drug Commissioner for rules and regulations carrying out the provisions of the law. As a result of a general reorganization of State departments by the General Assembly in 1959, the Food and Drug Commission was abolished and its duties transferred to a new Department of Consumer Protection.

Section 22-116 of the 1959 Revision of the General Statutes delegates the enforcement provisions of the feed law to the Commissioner of Consumer Protection.

The following regulations were issued by the Director of this Station and the Food and Drug Commissioner in February, 1949:

### REGULATIONS

#### REGULATION 1. FEEDS NOT CLASSIFIED AS CONCENTRATED COMMERCIAL FEEDING STUFFS (Sec. 22-112)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and therefore from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Under clause (2), above, registration will not be required for mixtures in which the ingredients, excepting corn, are whole grains. Corn, if present, may be whole or cracked.

---

<sup>1</sup> Analyses are by Mr. Richard Merwin, Mr. Werner Mueller, Mr. Walter Oliver and Miss Helen Kocaba; biological assays under direction of Dr. Lester Hankin; microscopic examinations by Miss Janetha Shepard; and sampling by Mr. R. Richard Nichols. Compilations by Mrs. Grace Connors and Miss Eleanor Hopcraft.

Clause (4) refers to feed ground from materials furnished by the consumer.

Under clause (5) feed is regarded as "mixed to order" and must be so tagged together with the name of the customer for whom it is mixed, or otherwise identified to distinguish it from regular brands offered for general sale. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand and subject to registration and other provisions pertaining to feeds in general.

#### REGULATION 2. METHOD OF LABELLING (Sec. 22-113)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark, under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentage of (c) crude fiber contained in the feed; (5) the separate ingredients of which the feed is composed.

While the law requires only a statement of the items enumerated above, no objection will be raised to more complete statements of chemical composition or formula.

#### REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A.O.A.C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and (4) on the label, a statement of net weight or volume.

The A.O.A.C. chick unit is the Vitamin D activity produced by one U. S. Pharmacopoeia unit of vitamin D from the U. S. P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

#### REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under the provisions of the fertilizer law in addition to registration as feeds. If sold exclusively for one or the other of

these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS- JOBBERS  
AND DEALERS WITH REFERENCE TO REGISTRATION  
(Sec. 22-114)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with the Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW  
AND OF OTHER TERMS

Person. The term "person" imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuff. The definitions and standards for feeding stuffs adopted from time to time by the Association of American Feed Control Officials are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut Statutes.

REGULATION 7. METHODS OF ANALYSIS  
(Sec. 22-113)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

#### REGULATION 8. CONCERNING MEDICATED FEEDS AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing, or claimed to possess, medicinal or condimental properties; nor does it include products consisting of supplemental minerals.

#### REGULATION 9. FEEDS IN DIFFERENT PHYSICAL FORMS

The same feed offered in different physical forms, e. g., mash and pellets, requires but one registration.

#### REGULATION 10. REVISIONS AND SUBSTITUTIONS OF REGISTRATIONS

A feed registration after being filed may be revised without payment of an extra registration fee.

A brand of feed duly registered and subsequently discontinued may be replaced by another brand for the unexpired period of registration without payment of an extra registration fee.

## REGISTRATIONS

For the period January 1, 1960 to December 31, 1960, 233 firms registered 1,416 brands of feeding stuffs, and 20 firms registered 54 brands of vitamin carriers.

## SUMMARY OF INSPECTION

In the calendar year 1960, a total of 1,465 samples was examined. This total included official samples of commercial feeds, carriers of vitamin D and other vitamins, and miscellaneous materials as shown in the following summary:

Biological specimens analyzed for poison	181
Check feeds, A. A. F. C. O.	16
Commercial feeding stuffs, official samples	768
Miscellaneous feeds, etc., analyzed for purchasers	126
Pasture grass and feedstuffs for Storrs Station	304
Vitamin carriers	70
	<u>1,465</u>

Samples examined for Storrs Station are in connection with investigations carried on by that Station and are not for discussion in this report.

## Commercial Feeding Stuffs

Results of our analyses of the official samples can be summarized as follows:

Total number of samples	768
Samples deficient in:	
one item	86
two items	6
Percentage of samples meeting guaranties	88
Total guaranties made	2,498 <sup>2</sup>
Guaranties not met:	
protein	26
fat	36
fiber	5
arsanilic acid	6
furazolidone	2
glycarbylamide	1
nicarbazin	12
nitrofurazone-furazolidone	1
3-nitro-4-hydroxyphenylarsonic acid	3
4-nitrophenylarsonic acid	3
sulfaquinoxaline	8
p-ureidobenzenearsonic acid	1
	104
Percentage of guaranties met	96

The proportion of samples meeting all guaranties and the overall percentage of satisfactory guaranties were both slightly better than the 87 and 95 per cent found in 1959.

<sup>2</sup> Seven samples with six guaranties, 38 with five guaranties, 103 with four guaranties, 615 with three guaranties, four with two guaranties, and one with one guaranty (guaranties for undetermined medicants not included).

Analyses are given in Table 1; deficiencies are shown by wavy underlining (~~~~). Tolerances used were 0.75 per cent for protein and fiber, 0.25 per cent for fat, and  $\pm 20$  per cent of guaranty for drugs.

### Vitamin Carriers

Sixty samples of vitamin D carriers were assayed for this vitamin by official methods, using day-old White Leghorn chicks for poultry feed supplements and white rats of the Osborne-Mendel strain for supplements for four-footed animals. All except 14 of these samples guaranteed one to five additional vitamins (usually riboflavin, niacin and calcium pantothenate), and results for these vitamins are included in Table 2 under the respective samples. This table also lists 10 samples of which seven contained vitamin D, but were not tested for this vitamin and three contained no D, but bore guaranties for one or more other vitamins.

All vitamin D Samples tested fully met their guaranties - a 100 per cent passing ratio that has been met only once before, (in 1958) in the 24-year period from 1937 to 1960 inclusive that vitamin D assays have been run.

On the basis of a  $\pm 20$  per cent tolerance, the numbers of samples failing to meet their guaranties for the other vitamins were as follows:

<u>Deficient in</u>	<u>No. of samples</u>	
Calcium pantothenate, niacin and riboflavin	1	
Calcium pantothenate and niacin	1	
Calcium pantothenate and riboflavin	1	
Calcium pantothenate and thiamine	1	
Niacin and riboflavin	1	
Calcium pantothenate	3	
Niacin	1	
Riboflavin	1	10

Of the total of 70 samples, 60, or 86 per cent, met all guaranties.

### Miscellaneous Feeds

One hundred and twenty-six unofficial samples of feed and fodder materials were examined. This total included commercial mixed feeds and feed ingredients submitted by dealers, farmers and the State Supervisor of Purchases, as well as samples of hay and silage whose analysis was requested by farmers and the Fairfield State Hospital. Check analyses of three feeds were run at the respective requests of the Maine Agricultural Experiment Station, a drug manufacturer and a dealer, and the riboflavin content of a guinea pig diet was determined for the Yale University School of Medicine.

Four commercial mixed feeds were deficient:

365. Purina D & F Chow. Ralston Purina Co., St. Louis, Mo., Fat, per cent: Guaranteed, 2.50; found, 1.59. Corn Meal present, not declared. Urea 0.23 per cent.

746B. Sea Born. Skod Co., Greenwich, Conn. Protein, per cent: Guaranteed, 5.00; found, 4.63.

775. David Small High Energy Breeder with NF 180 and Aureomycin. Yieldmor Feeds, Inc., Piqua, Ohio. Furazolidone, per cent: Guaranteed, 0.011; found, 0.0164.

9935. Yieldmor 24% Super Broiler Medicated B-125. Yieldmor Feeds, Inc., Piqua, Ohio. Fat, per cent: Guaranteed, 7.50; found 4.94. Nicarbazin, per cent: Guaranteed, 0.0125; found, 0.0070. 3-Nitro-4-hydroxyphenylarsonic acid, per cent: Guaranteed, 0.0050; found, 0.0032.

Several samples were submitted because they were suspected of having caused illnesses or deaths of animals. In only three cases were deleterious substances found in commercial feeds: An unknown brand of dog food contained 10 parts per million of arsenic and 30 p. p. m. of barium were found in two mink feeds. The 10 other miscellaneous samples implicated in possible poisoning cases were: Three samples of brook water containing traces of cyanide; two samples of water and two of bricks from a pond near a former sulphuric acid plant (the bricks were heavily impregnated with sulphuric acid, and one water sample contained 0.36 per cent of this acid); two meat baits containing cyanide; and some pasture grass near a property sprayed to kill brush that was found to contain 532 p. p. m. of arsenic.

The two following samples were tested for DDT for a manufacturer and a dairyman, not because any poisoning question was involved, but because materials fed to dairy animals are required to be free of any detectable trace of this insecticide:

1916. Apple Pomace. V. Tenedine & Sons, Inc., North Haven, Conn. DDT, 10 parts per million.

250. Corn Silage. Willard Pinney, Somers, Conn. DDT, 3 parts per million.

Analysis of the following sample used as mink food may be of interest:

1160. Frozen Ground Duck. I. Starr, Hartford, Conn. Water 70.16; protein, 10.50; fat, 17.57, and fiber, 0.13, per cent.

### Biological Specimens Examined for Poisons

One hundred and eighty-one biological specimens of which the great majority came from veterinarians, were examined in connection with suspected poisoning, mostly of domestic animals and poultry. In 55 of them, poisonous substances were found in sufficient quantity to suggest possible causes of illness or death.

The poisonous materials, and the number of specimens in which they were found, are summarized as follows: Alpha naphthyl thiourea ("ANTU") (1); antimony with cyanide (1); arsenic (9); arsenic with lead (1); barium (1); barium with lead (4); beryllium (1); chromium with lead and titanium (1); DDT (2); lead (17); mercury (8); nicotine (1); strychnine (2); sulphuric acid (5) and thallium (1). As usual, lead was the predominant poison, with 23 cases.

When these tests were begun in 1907 or earlier<sup>3</sup> most of the cases referred to us were those of farm animals; today, dogs and other pets predominate. Certain poisons are found almost exclusively in such pets or in wild animals. For instance, of the eight cases of mercury poisoning in 1960, four were cats, one a dog and one, several mink; only one each being a calf and a horse. The two cases of strychnine poisoning and the one case each of "ANTU" and thallium poisoning all involved dogs.

The positive beryllium sample was a specimen of lung tissue submitted by the Pathology Department of the Danbury Hospital which contained 0.018 part per million of this element. The two DDT cases were those of robins, whose viscera contained between 23 and 56 p.p.m. of this insecticide.

### Check Feeds

Thirteen feeds were analyzed in the check feed program sponsored by the Association of American Feed Control Officials, and three samples of alfalfa were assayed for carotene in a program also sponsored by that association.
